

May 24, 2010

Dear Valued Customers and Partners,

I am Bing Yeh, former Chairman and CEO of SST (Silicon Storage Technology, Inc.).

It is my great pleasure to introduce you to Greenliant Systems, a company formed recently by me and several other former executives of SST to acquire the NANDrive™, NAND Controller and Specialty Flash Memory assets of SST, now a wholly owned subsidiary of Microchip Technology Inc. This acquisition transaction was completed on May 21, 2010. Greenliant will operate these three acquired product lines as its initial product offering to serve the embedded system, data center and mobile Internet markets.

Greenliant's key engineering staff and management team include many of the original NANDrive and NAND Controller product development and business unit team members. Essentially, Greenliant is built on more than 20 years of expertise in designing low-power, high-quality flash memory, solid-state storage system and controller products. No other company has such an intimate level of knowledge on these products and is as well-positioned to continue supporting your needs as Greenliant. We are fully committed to providing continued and uninterrupted support to you through our well-established global sales channels and manufacturing partners in wafer foundry, chip packaging and testing. We will be working closely with Microchip over the next few weeks to ensure a seamless transition.

Green and Reliant, as our name implies, is the center of our company focus. Our corporate mission is to develop and market energy-efficient, highly reliable and secure solid-state storage solutions. We are excited to be working together with you to achieve mutual success in the years ahead. I encourage you to contact me directly if you have any questions about Greenliant or the transition process.

Best regards,
