### **EU REACH Directive Statment**

The European Union's REACH directive 1999/45/ED and Regulation (EC) Number 1907/2006 regulate the importation into the European Community of "Substances of Very High Concern (SVHC)" for the purpose manufacturing articles. REACH entered into force on June 1, 2007, with the aim of replacing previous legislation and harmonizing with remaining European Union legislation enacted to protect human health and the environment.

Greenliant products are not intended to and do not release SVHCs during normal or reasonably foreseeable conditions of use and operation. Therefore, Greenliant is not registering SVHC compounds at this time.

To further ensure compliance, Greenliant has confirmed with all of our supply chain manufacturing partners that none of our devices contain any of the SVHC materials currently included in the REACH directive and regulation referenced above, thus eliminating the need to declare usage of these chemical compounds.

Greenliant will monitor Annex XIV, Annex XVII and the European Chemicals Agency (ECHA) Candidate List of Substances of Very High Concern for Authorisation. As updates to the SVHC list are published, Greenliant will verify with our manufacturing partners that Greenliant devices do not contain SVHCs above a concentration level of 0.1% w/w (weight by weight). Greenliant will also ensure SVHCs are not present in articles in quantities over one ton per year.
